

Presaturated Stencil Wipes Featuring ProClean™

Tried-and-true ProClean™ is a mild flux remover that makes stencil cleaning fast and easy. Made from an ultra-pure blend of water-free alcohols, it is stronger and more aggressive than ordinary alcohol cleaners ("IPA"). Pure and almost completely water-free (unlike ordinary IPA) ProClean delivers excellent cleaning at a very affordable price. It can be used on all types of stencils, misprinted boards, and can remove any type of solder paste including lead-free. It is mil-spec approved for use on military electronics. No rinsing is required. Completely ozone-safe.

Importantly, the Stencil Wipes come with MicroCare's unique "slam-shut" packaging. Most companies make their presat wipes using loosely-fitting packaging that allows the solvent to dry out over time. But MicroCare's presat wipes are hermetically sealed and have the industry's longest shelf-life. And, once you have opened the package and removed a wipe, the spring-loaded dispenser slams shut, trapping the next wipe and the solvent inside the tub. This minimizes evaporation and keeps the wipe wet for months and months.
